TIC IITG Logo Design Concept

The symbol is a representation of innovation, collaboration, and growth. At its core, the connected dots embody the essence of technology and support, forming the solid foundation upon which the incubation process thrives. The interlinked dots also represent the interconnectedness of various elements crucial for nurturing and fostering startups.

The overall shape of the logo takes the form of a centre or hub, symbolizing the focal point where ideas converge and flourish. This central hub serves as the epicentre for creative exchange, collaboration, and the birth of groundbreaking innovations.

The use of green and blue colors in the dots reflects the inclusive community that the center attracts, emphasizing the convergence of diverse backgrounds and expertise. Green is linked with nature, growth, and renewal, while blue is associated with technology, intelligence, stability, and trust.

The upward-pointing shape signifies progress and growth, portraying the incubation centre as a catalyst propelling startups toward success as they graduate and soar beyond incubation. This echoes the idea that TIC is more than a space for ideas – it's a dynamic force fostering upward trajectories through support and resources.

Overall, the logo encapsulates the spirit of technology, support, diversity, innovation, collaboration, sustainability, and growth. It serves as a visual representation of the vibrant community and dynamic environment that the Technology Incubation Centre at IIT Guwahati offers to entrepreneurs, providing them with the essential tools and connections needed to thrive and reach new heights in their startup journey.

TIC IITG Logo Lockup

The TIC logo unit has two elements: the symbol and the name. This logo unit should be used in all official communications in correct proportions.

Typography

TIC logotype is set in the Anek typeface, which has sharp features and a unique personality. This modern san-serif multi-script display typeface is suitable for headlines / large text sizes. For paragraph texts, typefaces such as Mukta, Open Sans, or Roboto can be used.

Equipped with state-of-the-art resources and expert mentorship, the incubation center acts as a catalyst for startups, offering them the essential support and guidance needed to navigate the complexities of the tech industry.

Primary Colour Palette and Colour Specification

The colour scheme for TIC identity is carefully chosen to establish the visual identity in the conscious of people. An attempt should be made to maintain its consistency in the reproduction process. The complete colour specification is provided below, which can be referred to ensure the correct colour is reproduced on all applications.

The green colour is associated with nature, growth, and renewal. Beyond its calming associations with elements like the sky and ocean, the blue colour is connected to qualities of trust and reliability. Grey is a neutral colour and is symbolic of impartiality, balance, and calmness.

Guide for colour usage:

- Use **HEX** or **RGB** values for screen or digital viewing.
- Use **CMYK** values for standard process-color printing.
- Use **PMS** values for spot colour printing.

Green	Web HEX #00B451 RGB 0/180/81	Print CMYK 91/0/97/0 PMS 7481 C
Blue	Web HEX #004EBC RGB 0/78/188	Print CMYK 92/75/0/0 PMS 2728 C
White	Web HEX #FFFFFF RGB 255/255/255	Print CMYK 0/0/0/0
Grey	Web HEX #676973 RGB 103/105/115	Print CMYK 62/53/43/15 PMS P 173-10 C
Black	Web HEX #000000 RGB 0/0/0	Print CMYK 0/0/0/100 PMS Black

Vertical Logo Construction and Safe Zone

The logo must be kept distinct from competing text, pictures, and other graphic components in order to achieve optimum visual identity visibility. Therefore, there should be a minimum clear space around the logo on all four sides that is equal to the diameter of the pink circle as indicated in the image below.

Illustrated below are the correct proportions, sizes and safe zone for the full-text vertical logo lockup.

Vertical logo lockup (with safe zone)

Horizontal Logo Construction and Safe Zone

Illustrated below are the correct proportions, sizes and safe zone for the full-text horizontal logo lockup.

Horizontal logo lockup (with safe zone)

Logo Lockup Versions

In various contexts like websites, posters, or banners, use either the vertical or horizontal full-text logo lockup based on the available space. Opt for the short vertical version in more casual settings.

Logo Lockups on Backgrounds in Light Colours

This is a display of TIC logo application. For most logo applications on light coloured backgrounds such as white or light grey, the use of our full-colour logo is recommended.

In instances where black and white printing is necessary (e.g., newspapers, photocopies), the single-color black and

white logo, as shown below on the right, should be used.

This monochromatic option is also suitable for applications like etching on glass, metal, or other materials for items such as doors and trophies.

Full colour logo on a light coloured background

Single colour / monochromatic logo on a light coloured background

Logo Lockups on Backgrounds in Primary Colour Palette

Here, the use of TIC logo is showcased against various backgrounds in different colours. In such cases, it is recommended to use the full-colour logo within a white rectangle to ensure its distinct visibility.

Alternatively, use the single colour logo in either white or black (whichever provides better visibility against the background).

Full colour logo with white rectangle on a distinct coloured background

Single colour logo in reverse on black background

Single colour logo in reverse on a distinct coloured background

Incorrect Logo Applications

When using the TIC logo, make sure to follow prescribed guidelines about how it looks, including its size, proportions, colours, and font. This helps keep a consistent and professional look wherever the logo is used.

- To create and maintain a consistent visual presence of TIC, we must always make sure that we:
- Don't change the logo proportions
 - Don't change the logo appearance or colour scheme
 - Don't change the logo fonts

❌ Don't stretch the logo

❌ Don't squeeze the logo

❌ Don't change the logo colour or font

❌ Don't apply effects to the logo

Logo Application with Other Logos

The logo should be employed in proportion to other organizational logos, ensuring visual harmony. Whether opting for the standard vertical or horizontal version, use the logo judiciously based on appropriateness and space availability.

This adherence to proportional representation aims to maintain a cohesive visual identity across platforms.
